

**IN THE SPECIFICATION**

Please amend the specification as follows:

At page 15, the paragraph starting at line 20, please amend as follows:

B<sup>1</sup>

In addition, ~~the~~ each data stream splitter ~~manager~~ may include a buffer 470 of data from the data stream. This buffer 470 may store, for example, a predetermined amount of data obtained from the data stream for a past predetermined period of time. For example, the buffer 470 may store data obtained from the data stream for the past minute of session time. When a new client device joins the session, the new client device may be provided with this buffered data to provide a context by which the new client device can be joining in the session. The data in the buffer 470 may be continuously updated when the buffer 470 becomes full. Thereby, old data in the buffer 470 is cycled out, c.g., overwritten, when new data is received.
